 Cas test Front-tracking discontinu VDF.

  Cas test avec interface liquide-vapeur "interf"
                solide mobile            "body"
                concentration
  Interface liquide-vapeur initiale : un demi-plan + une goutte
  Remaillage, barycentrage, lissage, test collision, gravite,
  tension superficielle.
  Ecriture des resultats au format lata: un fichier lata avec
  les champs volumiques et les interfaces liquide-vapeur(lata1),
  un fichier avec uniquement le solide mobile (lata2)
 Les algorithmes de remaillage avec changement de connectivite
 ne sont pas strictement equivalents entre sequentiel et parallele.
 Il y a donc des ecarts entre le sequentiel et le parallele.
